

# ALFREDO RAÚL AGÜERO ORTIZ

Frontend Developer | React • Next.js • TypeScript • Three.js • GSAP

San Juan, Argentina | [alfreagor@gmail.com](mailto:alfreagor@gmail.com) | +54 264 624 6625

[LinkedIn](#) | [GitHub](#) | Available: Immediately | Timezone: GMT-3 | Remote-Ready

## PROFESSIONAL SUMMARY

Frontend Developer with solid foundation in React and Next.js, specialized in high-performance interactive web experiences (advanced animations with GSAP, 3D rendering with Three.js). Competent in full stack development with Node.js and MongoDB. Expertise in scalable component architecture, performance optimization, and responsive design. Seeking my first professional remote role to contribute quality code, best practices, and learn from experienced teams.

## PROFESSIONAL EXPERIENCE

**Frontend Developer (Professional Simulation)** | No Country | React + shadcn/ui + GSAP | May 2026 - Present

- **Mobile-First Interface Development:** Built responsive "OpsCore" web application for tablet/mobile devices, optimizing accessibility and UX for incident reporting. Implemented lazy loading and bundle optimizations (webpack configuration) to improve load times on 3G networks
- **Animation and User Experience:** Implemented smooth scroll-triggered interactions and transitions using GSAP (timelines, scrubbing), improving user engagement by 25%. Tested across multiple devices with modern browsers (Chrome, Firefox, Safari)
- **Differentiated Flow Management:** Component architecture using compound component patterns for role-based views (Operator, Supervisor, Management). Utilized Context API + Zustand for scalable state management
- **Agile Collaboration:** Interdisciplinary team (4 devs + 1 designer) under Scrum methodology. Git workflow with feature branches, pull requests, and code reviews. Rapid adoption of new tools (shadcn/ui, headless components)

## FEATURED PROJECTS

**Interactive Apple iPhone 15 Clone** | React + Three.js + GSAP | 2026 | [View Project](#)

- Immersive web experience with real-time 3D rendering: 60+ FPS on modern browsers, 3D geometry and texture optimization using instancing
- Advanced scroll-triggered animations with GSAP timelines synchronized with scroll position. Responsive components (desktop/mobile) with media queries and useGSAP hook
- Scalable architecture: clear separation between 3D components (Three Fiber), animation logic, and UI components. Code splitting with dynamic imports to optimize LCP

**Nike E-commerce (Landing Page)** | React + Tailwind CSS + Stripe | 2026 | [View Project](#)

- Responsive landing page with reusable components and patterns. 30% reduction in code duplication through composition and custom hooks
- Stripe integration for secure payments (webhooks, error handling). Asset optimization (lazy image loading with next/image equivalent), improving Core Web Vitals
- Testing with React Testing Library for critical components (forms, cart). Mobile-first design validated on real devices

**Interactive Operating System Simulator** | React + Zustand + Tailwind CSS | 2026 | [View Project](#)

- Functional application simulating OS with advanced state management using Zustand (lighter than Redux). Modern React patterns: custom hooks, lazy window loading

- Scalable architecture based on compound components. Performance optimization: code splitting, selective memoization with React.memo and useMemo
- Intuitive UX with drag-and-drop, resizable windows, and smooth animations. Responsive on tablets and desktops

#### Full Stack Mobile E-commerce Application | React Native + Node.js + MongoDB + Stripe | 2026

- Native Android app (Expo) with smooth UX. Optimized components, lazy product loading, infinite scroll with React Query caching
- Scalable backend with Node.js/Express: JWT authentication, product management (CRUD), Stripe payment integration with webhooks. MongoDB schema design optimization
- Global state management with Redux/Zustand. Optimized checkout flow, reduced form friction

## TECHNICAL SKILLS

**Frontend (Advanced):** React (hooks, context, lazy loading, code splitting), Next.js (SSR, SSG, API routes), TypeScript, Tailwind CSS, GSAP (timelines, scroll triggers), Three.js + React Three Fiber, Bootstrap, SASS

**Backend & Databases (Intermediate):** Node.js, Express, MongoDB (schema design, indexing), JWT authentication, REST APIs

**Mobile (Intermediate):** React Native, Expo, NativeWind

**Tools & Practices:** Git (feature branches, rebase, squash), GitHub, Postman, Axios, Stripe integration, Clerk, Cloudinary, Figma, Zustand, React Query, Vite, Jest, React Testing Library, Core Web Vitals

## EDUCATION

**Associate Degree in Programming** | Universidad Nacional de San Juan | In Progress

*Current Level: Advanced student with professional simulation experience. Transitioning to full-time remote role.*

**Courses in Progress:** Meta Front-End Developer | Professional Certificate in UX Design | Front-End Coding Fundamentals

#### Completed Training:

- Web Development with Node.js (Ministry of Education) - April 2026
- Professional Certificate in Project Management (Google)
- Valtech - Karuna Foundation - Pescar Foundation (300 hours)
- Telecom Digitalers Bootcamp (130 hours)
- Egg Cooperation - Programming from Zero
- MindHub Full Stack Developer Bootcamp

## LANGUAGES

**English:** B2 - Fluent conversational (technical documentation reading, remote team communication)

**Spanish:** Native
